### A Brief Firm Update:

We would like to take this opportunity to thank you for your business and more importantly, your trust. From day one our goal has not been to be the largest firm, but to provide our clients with the highest level of service possible. We have been blessed with strong, steady growth over the years, and have made significant investments in new resources, technology and our firm's greatest asset, quality team members.

For many of our clients, the primary interaction is with their consultant. As part of our commitment to improving service we have created dedicated service teams, designed to enhance your consultant's ability to provide timely responses and thoughtful advice. Each team is tasked with responsibility for all aspects of the client relationship, and is further supported by our growing research group and administrative staff. This support, combined with various cross-team interactions foster even greater synergies and are designed to deliver superior client solutions.

While our industry is changing, The Bogdahn Group is steadfast on remaining truly independent. We strive to deliver clear recommendations focused exclusively on helping you achieve your objectives.

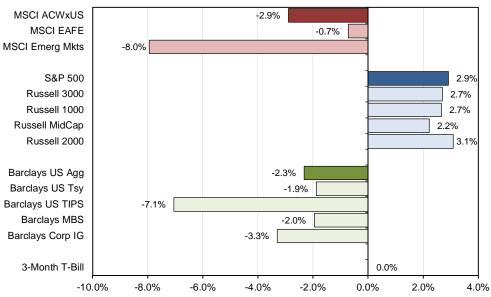

We would welcome your visit to our offices in Orlando to meet the entire team, and again thank you for the opportunity to serve.

The Bogdahn Group

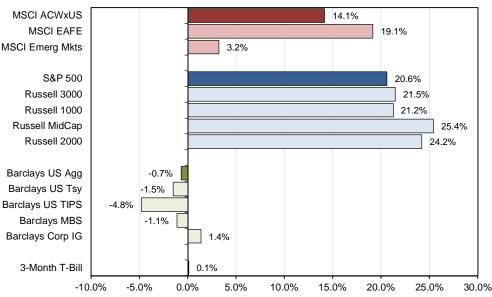

- Dickens' classic A Tale of Two Cities starts off with the proclamation, "It was the best of times, it was the worst of times..." This is an appropriate description of 2013's second quarter. In the first half of the period, the U.S. equity markets continued the strong run posted in the first quarter, which saw double digit returns across many U.S. indices. Equity markets were up 3-4% from the beginning of April through late May. However, this reversed in June as the S&P 500 declined 1.1% off its high.
- The quarter started with a surprising jobs report in April (+165,000 new non farm payroll jobs, which was above expectations), and in May the markets were lifted by a strong rise in the Chicago Purchasing Managers' Index, which was also unforeseen by market participants. This momentum was squashed when Fed Chairman Ben Bernanke at the May Federal Open Market Committee (FOMC) meeting suggested the Fed might begin "tapering" of quantitative easing (QE). These comments also foreshadowed a potential culmination in 2014 of the bond purchasing program that has dominated market behavior for much of the past few years.
- International stocks lagged during the second quarter as evidenced by the MSCI EAFE Index's return of -0.7%. Emerging stocks fared even worse with the MSCI Emerging Markets Index down 8.0%. The performance gap for the year-to-date period between developed international and emerging equities is the widest it has been since the 1997-98 time period which began with the infamous "Asian Contagion."
- The U.S. bond market, as represented by the Barclays Aggregate Bond Index, fell 2.3% in the second quarter of 2013. The 2.3% decline was the largest quarterly drop since the second quarter of 2004. The dramatic losses were broad-based as all major sectors moved sharply lower. Investment grade credit suffered the largest decline with a decrease of 3.3%. The U.S. Treasury and MBS sectors each returned 1.9%. The poor second quarter performance pushed the year-to-date and trailing one-year returns on the Barclays Aggregate Index into negative territory.

## **Quarter Performance**

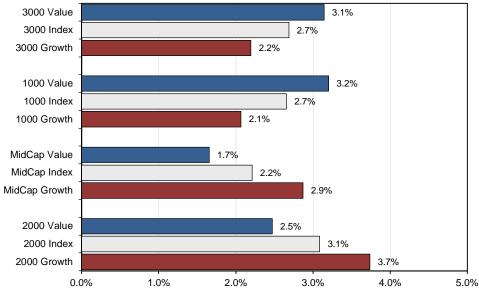

#### 1-Year Performance

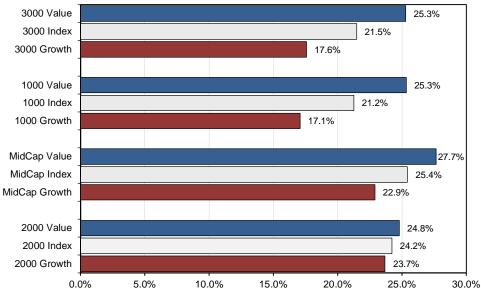

- Within the U.S. equity market, all size groupings produced positive performance. Small caps, as represented by the Russell 2000 Index, were ahead of their large cap peers. For the third consecutive guarter, small caps outperformed large caps in aggregate. The return for the Russell 2000 (+3.1%) outpaced that of the Russell 1000 (+2.7%) by 40 basis points (bps). Equities, which were up as much as 4% earlier in the quarter, were driven lower as a result of Fed Chairman Bernanke's influential comments.
- Although the revision to the first quarter's GDP was disappointing at 1.8% vs. the original report of 2.4%, the main cause of the change was spending cuts by the federal government due to the sequester. The market gains during the period were largely driven by the consumer sector. Housing posted impressive gains with building permits running near the one million rate once again (up from just below 800,000 year over year), and home prices are showed strong signs of recovery in more markets. Retail sales also improved.
- Price-to-earnings (PE) multiples rose to their highest levels in three years. As the economic recovery has broadened, consumer confidence readings have improved and are near six-year highs. Consumer confidence readings are an important predictor of consumer spending, accounting for 70% of the U.S. economy, which influence and drive the markets. Corporate profits also continue to show a steady advance and are 20% above the peak of the last recovery cycle in 2006.
- The quarter's forward S&P 500 PE ratio was 13.8X (on forward 12-month EPS estimates of \$116.12), placing the S&P 500 above the 5-year average forward PE of 12.9X but below the 10-year forward PE of 14.1X, which suggests equities were not overpriced but were not terribly attractive either. Forward estimates aligned with past 12-month earnings trends, which reflect the record earnings levels for the S&P 500 that was driven by heightened profit margins but flat revenue growth.
- At 13.9X current PE, the large cap blend (Russell 1000 Index) segment sported the most favorable valuation when compared to its 20 year historical average of 16.2X (86.2%). Small cap value (Russell 2000 Value Index) was the "richest" of the traditional style box segments, at 107.2% (15.3X current vs. 14.2X historical).

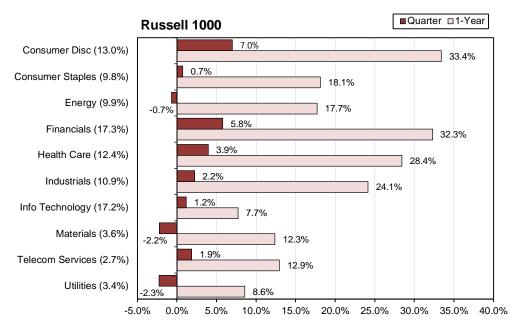

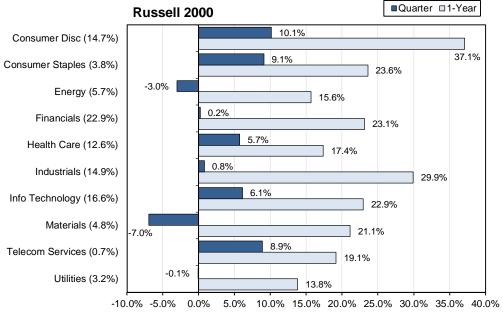

## 1-Year Performance - Russell Style Series

- The major equity market "theme" this quarter was the rapid reversal in performance for the traditional high dividend yielding sectors, such as Materials and Energy (as well as Utilities in the small cap space). With Bernanke's comments suggesting an end to QE may be near, the high dividend yields exemplified by companies within these sectors became less compelling. With the ten-year bond rising 65 bps during the quarter, investors are already starting to act on this potential outcome. The strong performance of Utilities within the Russell 1000 was somewhat of an anomaly and was driven by merger and acquisition activity within that segment, highlighted by Berkshire Hathaway's takeover of NV Energy (NVE) in late May.
- "Defensive" sectors, which include health care, consumer staples, utilities and telecommunications services, are currently trading at a premium to "cyclical" sectors, which include information technology, industrials, energy, consumer discretionary, and materials. Financials do not fall into either classification. After reaching peak valuations in late 2012, investors have migrated to higher cyclical exposure given favorable relative valuations. This trend is expected to continue as long as economic growth remains positive and steady. Currently, defensive sectors trade at 1.12X that of cyclical sectors on a next 12-month PE basis. This is down from a high of 1.25X in late 2012.
- With sector performance over the past few years being largely a byproduct of the impact of macro factors (debt ceiling, U.S. Treasury downgrade, Euro issues, etc.) and the resulting flight to quality (dividend payers and large blue chip companies), correlations between stocks were driven to all time highs. This resulted in an investment manager's stock selection having less of an impact on relative performance. This has changed of late, as correlations have fallen from a high of approximately 0.65 in 2011 to 0.34 today. This is still slightly higher than the historical average of 0.26, giving managers optimism that stock selection (and, as a result, sector returns) will be a result of strong company fundamentals and not macro influences.

Source: Morningstar Direct

- International equity markets ended the second quarter in negative territory, with emerging equity markets continuing their "worst performer" status. April saw very strong international equity returns, while May and June were progressively more negative. Trailing one-year international equity returns remain in positive territory, with the exception of Latin America.
- While U.S. Fed Chairman Bernanke's comments regarding possible QE "tapering" may have had some negative effects on emerging equities, the more obvious culprit was news coming out of Turkey and China. Widespread social unrest in Turkey in early June caused the local stock market to collapse. The country had been a recent investor darling after upgrades from Moody's and Fitch from junk status to the lowest rung of investment-grade. Investor fears of a continued Chinese economic slowdown were compounded by rumors of an impending banking crisis in the country. The People's Bank of China signaled its concern in June by engineering a credit squeeze to discourage loan growth.
- The Japanese Yen continued its depreciation trend relative to the U.S. dollar (USD) during the quarter. Local equity returns for the country were 10.2% versus a return of 4.3% in USD. In general, Asian and emerging country currencies also depreciated versus the USD, while developed European currencies moderately appreciated during the period.
- Australia and New Zealand were the worst-performing developed equity markets during the quarter (-13.9% and -10.4%, respectively), while Peru was by far the worst emerging equity market at -27.5%. Several developed equity markets ended the quarter in positive territory, including several European countries and Japan. Only Hungary, Malaysia, and Taiwan turned in positive performance under the emerging equity category.
- Returns across sectors again varied widely during the quarter and displayed no trend in regards to defensive versus cyclical sectors. Consumer discretionary, telecommunications services, and utilities stocks, on average, were the best performers. Energy and materials stocks struggled and ended the quarter down significantly.

Source: MSCI Global Index Monitor, Returns are gross

- Fixed income markets experienced broad declines in the second quarter of 2013. The sell-off was in response to comments from Fed Chairman Ben Bernanke that fueled speculation the FOMC will reduce or "taper" its bond purchases later in the year. The declines in the market were broad-based and covered all sectors and credit levels. As a result, global bonds, as measured by the Barclays Multiverse Index, fell 2.7%. Domestically, the Barclays Aggregate Bond Index fell 2.3%.
- Returns across investment grade sectors ranged from a 7.1% decline in U.S. TIPS to a more modest decline of 1.9% in the Treasury and securitized (MBS, ABS, CMBS) areas of the market.
- Within investment grade corporate bonds, performance across industry groups was strongest within financials as they outperformed industrials and utilities by 70 and 121 bps respectively.
- The trend of low quality bonds outperforming high quality reversed as losses increased down the investment grade credit spectrum. The only exception to the trend change was high yield, which exceeded all investment grade credit groups.
- Interest rates on longer-dated bonds rose dramatically during the period while rate increases in the shorter maturities were more muted. Along the Treasury curve, the 2- and 10-year Treasuries rose 11 and 65 bps respectively. As a result, the shorter-duration Barclays Intermediate Bond Index outperformed the longer-duration Aggregate Index by 50 bps.
- Over the past twelve months, corporate bonds have easily outpaced Treasury and mortgage securities, generating a positive return versus negative returns for the other sectors. Within corporate bonds, the strong credit rally in 2012 resulted in high yield being the big "winner" as the asset class bested investment grade credit by 810 bps (9.5% vs. 1.4%).
- International bonds, as measured by the Barclays Global Aggregate ex U.S., continued to sell off, falling 3.1% during the second quarter. The 3.1% drop marked the third consecutive quarter of negative returns for the benchmark. On a trailing one-year basis, international bonds lag their domestic counterparts by 260 bps (-3.4% vs. -0.7%).

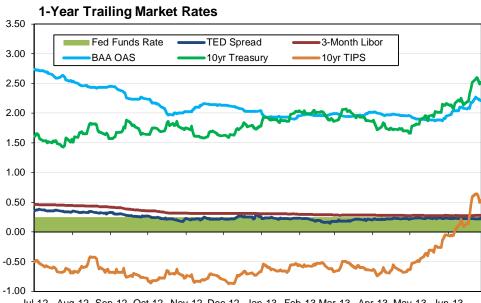

Source: Barclays Capital Live

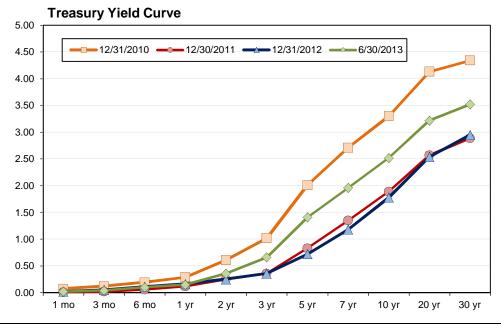

- During the second guarter of 2013, volatility in domestic bonds increased sharply resulting in a 2.3% decline in the Barclays Aggregate Index (the worst quarterly return since 2004). Despite somewhat disappointing economic news, the quarter began with the market rising 1.0% in April. The key driver of returns was a continuation of lower quality, longer-dated bonds leading the market. In May, mixed signals from Fed Chairman Ben Bernanke focused attention on a reduction ("tapering") of the central bank's asset purchases. As a result, bond markets reversed course resulting in a sharp rise in interest rates and a widening in spreads. On June 19, Chairman Bernanke released an optimistic statement on the U.S. economy which served to further heighten concern that the Fed would taper their asset purchases sooner than expected. Bernanke's comments served to increase the pressure on bond prices leading to a 1.6% decline during the month of May.
- Though rates rose sharply during the second quarter, the shift was uneven across the vield curve with short rates virtually unchanged and intermediate and long-dated bonds moving the most. The absolute change in yield levels is below-:

2-Year U.S. Treasury +11 bps 5-Year U.S. Treasury +64 bps 7-Year U.S. Treasury +72 bps 10-Year U.S. Treasury +65 bps

- For several quarters, investors have faced a market characterized by abnormally low yields and little income to cushion any measurable price decline. Those price declines, via higher rates, arrived in the second quarter. The result was a decline in the Barclays Aggregate Index not seen in almost ten years.
- Even though markets now offer yields higher than those of the past several quarters, the overall level of interest rate risk continues to be much higher than the potential return. Going forward, we believe volatility will likely persist. As painful as the second quarter was for many market participants. flat to negative returns could persist over the near-term.

#### **Mutual Fund Info from Lipper**

Product Name : American Funds EuPc;R-6 (RERGX)

Fund Family : American Funds

Ticker: RERGX

Peer Group: IM International Large Cap Growth Equity (MF)

Benchmark: MSCI AC World ex USA

 Fund Inception:
 05/01/2009

 Portfolio Manager:
 Team Managed

 Total Assets:
 \$24,202 Million

 Total Assets Date:
 05/31/2013

 Gross Expense:
 0.50%

 Net Expense:
 0.50%

 Turnover:
 27%

#### **Summary Description**

The investment seeks to provide you with long-term growth of capital. The fund invests primarily in common stocks of issuers in Europe and the Pacific Basin that the investment adviser believes have the potential for growth. It normally invests at least 80% of net assets in securities of issuers in Europe and the Pacific Basin. The fund may invest a portion of its assets in common stocks and other securities of companies in countries with developing economies and/or markets and may also hold cash, money market instruments and fixed-income securities.

- 1. Manager outperformed the index over the trailing three and five year periods.
- 2. Manager ranked above the 40th percentile over the trailing three and five year periods.

2. Manager ranked above the 40th percentile over the trailing three and five year periods.3. Less than four consecutive quarters of under performance relative to the benchmark.

- 3. Less than four consecutive quarters of under performance relative to the benchmark.
- 4. Three and five year down market capture ratio less than index.

4. Three and five year down market capture ratio less than index.

5. Manager reports compliance with PFIA.

5. Manager reports compliance with PFIA.

• Neither The Bogdahn Group, nor any covered associates have made political contributions to any official associated with the Tequesta Public Safety Officers' Pension Fund in excess of the permitted amount.

Return	- Compounded rate of return for the period.
Standard Deviation	- A statistical measure of the range of a portfolio's performance. It represents the variability of returns around the average return over a specified time period.
Sharpe Ratio	- Represents the excess rate of return over the risk free return divided by the standard deviation of the excess return. The result is an absolute rate of return per unit of risk. A higher value demonstrates better historical risk-adjusted performance.
Alpha	- A measure of the difference between a portfolio's actual performance and its expected return based on its level of risk as determined by beta. It determines the portfolio's non-systemic return, or its historical performance not explained by movements of the market.
Beta	- A measure of the sensitivity of a portfolio to the movements in the market. It is a measure of the portfolio's systematic risk.
R-Squared	- The percentage of a portfolio's performance that can be explained by the behavior of the appropriate benchmark. A high R-Squared means the portfolio's performance has historically moved in the same direction as the appropriate benchmark.
Treynor Ratio	- Similar to Sharpe ratio but utilizes beta rather than excess risk as determined by standard deviation. It is calculated by taking the excess rate of return above the risk free rate divided by beta to derive the absolute rate of return per unit of risk. A higher value indicates a product has achieved better historical risk-adjusted performance.
Downside Risk	- A measure similar to standard deviation that utilizes only the negative movements of the return series. It is calculated by taking the standard deviation of the negative quarterly set of returns. A higher factor is indicative of a riskier product.
Tracking Error	- This is a measure of the standard deviation of a portfolio's returns in relation to the performance of its designated market benchmark.
Information Ratio	- This calculates the value-added contribution of the manager and is derived by dividing the active rate of return of the portfolio by the tracking error. The higher the Information Ratio, the more the manager has added value to the portfolio.
Consistency	- The percentage of quarters that a product achieved a rate of return higher than that of its benchmark. Higher consistency indicates the manager has contributed more to the product's performance.
Excess Return	- Arithmetic difference between the manager's performance and the risk-free return over a specified time period.
Active Return	- Arithmetic difference between the manager's performance and the designated benchmark return over a specified time period.
Excess Risk	- A measure of the standard deviation of a portfolio's performance relative to the risk free return.
Up Market Capture	- The ratio of average portfolio performance over the designated benchmark during periods of positive returns. A higher value indicates better product performance.
Down Market Capture	- The ratio of average portfolio performance over the designated benchmark during periods of negative returns. A lower value indicates better product performance

The Bogdahn Group compiled this report for the sole use of the client for which it was prepared. The Bogdahn Group is responsible for evaluating the performance results of the Total Fund along with the investment advisors by comparing their performance with indices and other related peer universe data that is deemed appropriate. The Bogdahn group uses the results from this evaluation to make observations and recommendations to the client.

The Bogdahn Group uses time-weighted calculations which are founded on standards recommended by the CFA Institute. The calculations and values shown are based on information that is received from custodians. The Bogdahn Group analyzes transactions as indicated on the custodian statements and reviews the custodial market values of the portfolio. As a result, this provides The Bogdahn Group with a reasonable basis that the investment information presented is free from material misstatement. This methodology of evaluating and measuring performance provides The Bogdahn Group with a practical foundation for our observations and recommendations. Nothing came to our attention that would cause The Bogdahn Group to believe that the information presented is significantly misstated.

The strategies listed may not be suitable for all investors. We believe the information provided here is reliable, but do not warrant its accuracy or completeness. Past performance is not an indication of future performance.
