Investment Performance Review
3rd Quarter 2014

3rd Quarter 2014 Market Environment

- Large cap companies made it through the quarter relatively unscathed compared to their mid and small cap peers. While experiencing the same 'down-up-down' monthly pattern as seen in mid and small caps, the magnitude of the declines was far less pronounced. The strong +4.0% August return of large caps more than offset the minor declines in both July and September. The general consensus was that macro uncertainty (ISIS, Ukraine, Ebola, etc.) had a disproportionate impact on small and mid cap companies when compared to large caps, largely due to investor preference for safe haven blue chip equities.
- Small cap stocks experienced their worst quarter in three years and ended a streak of eight consecutive positive quarters. After months of worry expressed by small cap managers regarding stretched valuations for small cap companies, these fears were finally realized in the third quarter as the market sold off considerably. Unlike the first two quarters of the year, which were both marked by slow starts to the quarter followed by two consecutive up months, the third quarter saw the Russell 2000 decline -6.0% in July, followed by an increase of +5.0% in August, only to reverse course again in September, declining -6.0%.
- In international equity, emerging markets (-3.4%) once again outperformed developed markets (-5.8%) for the quarter. However, both market segments posted negative absolute returns, primarily driven by September's sell-off. While one-year returns for the three non-US equity indices remained in positive territory, they significantly lagged all domestic equity index performance with the exception of small caps.
- After moving higher in the first half of 2014, domestic bonds were essentially flat during the third quarter, rising just +0.2%. The trailing, one-year return remained in positive territory (+4.0%). Performance dispersion across sectors was low, as Government Bonds returned +0.3% followed by Mortgages at +0.2%. In contrast, Corporate Bonds lagged, declining -0.1% for the period. TIPS performance remained volatile, falling -2.0% after rising sharply in the first half of the year.

Quarter Performance

1-Year Performance

- Large cap stocks tend to outperform mid and small cap companies at the tail end of economic cycles, so the returns seen in the chart to the right were no surprise. However, the disparity of returns was somewhat unexpected and was largely driven by macro uncertainty and investor preference. With interest rates remaining low, equities remained the investment of choice by income-starved investors. Despite a challenged third quarter, dividend paying companies had a strong first half of the year, and a higher percentage of dividend payers resided in greater numbers in the larger market capitalization areas. In addition, investors often flocked to the security of large caps when macro uncertainties became more pronounced.
- The third quarter represented the second consecutive quarter in which small cap stocks lagged large cap stocks. Notably, the relative performance gap was the largest since the first quarter of 1999.
- Equities with the highest quartile dividend yield returned -5.6% during the period. This is a stark contrast from the first two quarters in which the highest yielding companies returned +10.2%. Much of this heightened volatility was attributed to the end of the Fed's quantitative easing (QE) program, which culminated in October. With the prospect of interest rates naturally creeping higher over time as a result of the additional stimulus, higher dividend paying companies temporarily suffered.
- The discrepancy in quarterly returns between growth and value benchmarks was largely related to performance within the Health Care sector. Health Care was the second best performing sector during the quarter in both value and growth benchmarks (only Financials were better in value; Consumer Staples in growth). However, Health Care made up a far higher percentage weight in the growth benchmarks, catapulting growth benchmarks ahead of value in all market capitalizations.
- As a result of the recent sell-off, on an absolute basis, small cap stocks became cheaper, when compared to their mid cap brethren, but remained more expensive than large caps. At 17.8x current P/E, small caps fell between mid caps (18.1x) and large caps (15.2x). On a relative P/E basis, when compared to 20-year average P/E ratios, value appeared overvalued across all capitalizations while growth was undervalued across the capitalization spectrum.

- There was wide economic sector performance dispersion during the third quarter. Within large caps, Health Care and Technology posted the strongest results. These two areas comprised a larger combined weight in the Russell 1000 Growth Index (42.0%) than in the Russell 1000 Value Index (22.9%). As a result, growth outpaced value during the third quarter. These sectors house some of the largest companies in the S&P 500 Index and many have led the index on a year-to-date basis.
- After performing very well in the second quarter, both the Energy and Utilities sectors experienced a reversal due to selling off during the third quarter. Energy did poorly in large caps (-8.5%) but fared even worse in the Russell 2000 Index of small cap companies, declining -20.6%. While seven of the ten S&P 500 economic sectors finished the third quarter higher, each sector of the Russell 2000 posted negative returns for the period.
- On a trailing P/E basis, Energy and Telecom Services were significantly cheaper than other sectors within the S&P 500. These two areas traded at 14.6x and 10.7x, respectively, which was well below the Index trailing P/E of 18.4x. On a relative basis, when compared to the 20-year average P/E ratio of 19.5x, the index was fairly valued to somewhat cheap. In fact, half the index trades below its long-term average P/E.
- Traditionally, September is the worst month for equity markets and this year was no exception. Despite a weak September, there is some reason for optimism. First, the US dollar (USD) continues to gain strength. Since many global commodities are priced in USD, the USD's strength has a downward pressure on commodity prices, particularly crude oil (-10%), which can fuel greater discretionary consumption and lead to stronger GDP growth. In addition, US companies have arguably superior relative fundamental growth prospects, which should provide support to domestic equities going forward.

Source: Morningstar Direct

- After a relatively stable first half of 2014, volatility spiked during the third quarter. July and September were significant, negative months for the developed overseas indices, while August returns were slightly positive.
- Similar to last quarter, the range of returns for the individual countries outside of the US was wide. The only developed country whose equities ended the quarter in positive territory was Israel (+0.4%). The worst-performing developed country was Portugal (-24.9%) followed closely by Austria (-21.5%). On the emerging side, Egypt and the UAE were the top equity performers, up +28.2% and +22.9%, respectively. Greece was again the worst-performing equity market within the EM universe with a return of -20.0% for the quarter.
- During the third quarter, USD appreciation created a significant drag on returns for U.S. investors in overseas markets. All four of the broad, non-US equity indices shown to the right ended the quarter in positive territory when measured in local currency terms, but negative performance in USD.
- USD strength weighed on the Energy sector during the third quarter, which posted the weakest sector return (-10.0%) in the MSCI-ACWI xUS index. The Materials sector, which is also negatively impacted by USD strength, was the second worst performing sector within the MSCI ACWI x US index, returning -9.5% for the quarter. In the developed market MSCI-EAFE index, Health Care was the only sector to end the quarter in positive territory (+0.4%). Health Care (+9.9%) was also positive in the MSCI-EM index along with Telcom Services, which returned 6.2% for the third quarter.
- The Health Care sector's strength led growth to outperform value in both developed and emerging markets. Small cap stocks underperformed large caps in developed markets but outperformed in emerging markets.

Source: MSCI Global Index Monitor (Returns are Gross in USD)

- Domestic bond markets were mostly flat in the third quarter, as economic fundamentals continued to indicate moderate growth and low inflation. Central bank policy remained mostly unchanged as the Federal Reserve remained on pace to end its QE program in October. Conversely, in September the European Central Bank announced additional interest rate cuts as well as the creation of their own bond buying (QE) program. The moves were designed to boost anemic growth in the Eurozone.
- In contrast to the second quarter, when all major sectors posted positive results, sector performance was mixed during the third quarter. Treasuries and mortgages rose +0.3% and +0.2%, respectively. These modest gains were partially off-set by weakness in corporate credit (-0.1%) and TIPS (-2.0%).
- After outperforming for several quarters, lower rated bonds lagged their higher quality peers. Baa-rated bonds lagged higher quality credits by 20 – 50 basis points (bps) during the period. On a one-year basis, Baa-rated bonds outpaced higher-rated credits by a wide margin.
- Longer-dated securities outperformed short and intermediate maturities despite the continued decline of the Federal Reserve's QE program. The rally pushed the broad-based Barclays Aggregate Index ahead of the Barclays Intermediate Index by +0.2% for the quarter and +1.3% over the past twelve months.
- High Yield bonds fell -1.9%, marking the first negative quarterly return for the asset class since the second quarter of 2013. After exceeding investment grade bonds for seven consecutive quarters, high yield bonds trailed investment grade securities for the last six months, but remain ahead on a trailing one-year basis by 40 bps.
- The US bond market easily outpaced International bonds, represented by the Barclays Global Aggregate ex US Index, which was negatively impacted by USD strength by 560 bps. The third quarter's weak performance by global bonds pushed one-year trailing domestic bond performance ahead by a wide margin.

Quarter Performance

1-Year Performance

- With the Fed's bond buying program drawing to a telegraphed close, investors are increasingly focused on the timing and magnitude of an eventual increase in interest rates and the impact it will have on bond portfolios.
- After moving sharply lower in the second quarter, option adjusted spreads on Baa-rated bonds widened by 15 bps during the third quarter. This spread widening has a negative impact on bond prices (which move in the opposite direction) and performance of lower quality credits. This quarter's rise in spreads erased the rally that occurred during the second quarter, though current spread levels remain below the level from one year ago.
- The yield curve in the US continued to flatten during the third quarter. Since prices and performance move in the opposite direction of yields, the long-end of the curve was the best performing maturity segment. The yield on the 10-year Treasury rose from 2.53% to 2.65% in early July and then steadily rallied to 2.34% by late August. In September, bonds retreated from the August rally, pushing the yield back to 2.52% by quarter-end.
- Yields on shorter-dated maturities were essentially unchanged as the Fed continued to hold the Fed fund rate near zero. Rates on intermediate maturities ended the quarter 10 to 20 bps higher.
- Since rising to more attractive yields in mid-to-late 2013, the yield curve has gradually flattened, spreads have narrowed, and interest rates have declined, particularly in longer-dated maturities. While this has resulted in mildly positive returns over the past twelve months, the return outlook is likely to be challenged by the prospect of higher interest rates in the future. The impact of any future rate increases will likely be exacerbated by the fact that low nominal yields and narrow credit spreads offer only a modest level of income to offset this interest rate risk, particularly if rates rise significantly and in a short period of time.

- Neither The Bogdahn Group, nor any covered associates have made political contributions to any official associated with the Tequesta Public Safety Officers' Pension Fund in excess of the permitted amount.

Active Return	- Arithmetic difference between the manager's performance and the designated benchmark return over a specified time period.
Alpha	- A measure of the difference between a portfolio's actual performance and its expected return based on its level of risk as determined by beta. It determines the portfolio's non-systemic return, or its historical performance not explained by movements of the market.
Beta	- A measure of the sensitivity of a portfolio to the movements in the market. It is a measure of the portfolio's systematic risk.
Consistency	- The percentage of quarters that a product achieved a rate of return higher than that of its benchmark. Higher consistency indicates the manager has contributed more to the product's performance.
Down Market Capture	- The ratio of average portfolio performance over the designated benchmark during periods of negative returns. A lower value indicates better product performance
Downside Risk	- A measure similar to standard deviation that utilizes only the negative movements of the return series. It is calculated by taking the standard deviation of the negative quarterly set of returns. A higher factor is indicative of a riskier product.
Excess Return	- Arithmetic difference between the manager's performance and the risk-free return over a specified time period.
Excess Risk	- A measure of the standard deviation of a portfolio's performance relative to the risk free return.
Information Ratio	- This calculates the value-added contribution of the manager and is derived by dividing the active rate of return of the portfolio by the tracking error. The higher the Information Ratio, the more the manager has added value to the portfolio.
R-Squared	- The percentage of a portfolio's performance that can be explained by the behavior of the appropriate benchmark. A high R-Squared means the portfolio's performance has historically moved in the same direction as the appropriate benchmark.
Return	- Compounded rate of return for the period.
Sharpe Ratio	- Represents the excess rate of return over the risk free return divided by the standard deviation of the excess return. The result is an absolute rate of return per unit of risk. A higher value demonstrates better historical risk-adjusted performance.
Standard Deviation	- A statistical measure of the range of a portfolio's performance. It represents the variability of returns around the average return over a specified time period.
Tracking Error	- This is a measure of the standard deviation of a portfolio's returns in relation to the performance of its designated market benchmark.
Treynor Ratio	- Similar to Sharpe ratio but utilizes beta rather than excess risk as determined by standard deviation. It is calculated by taking the excess rate of return above the risk free rate divided by beta to derive the absolute rate of return per unit of risk. A higher value indicates a product has achieved better historical risk-adjusted performance.
Up Market Capture	- The ratio of average portfolio performance over the designated benchmark during periods of positive returns. A higher value indicates better product performance.

The Bogdahn Group compiled this report for the sole use of the client for which it was prepared. The Bogdahn Group is responsible for evaluating the performance results of the Total Fund along with the investment advisors by comparing their performance with indices and other related peer universe data that is deemed appropriate. The Bogdahn group uses the results from this evaluation to make observations and recommendations to the client.

The Bogdahn Group uses time-weighted calculations which are founded on standards recommended by the CFA Institute. The calculations and values shown are based on information that is received from custodians. The Bogdahn Group analyzes transactions as indicated on the custodian statements and reviews the custodial market values of the portfolio. As a result, this provides The Bogdahn Group with a reasonable basis that the investment information presented is free from material misstatement. This methodology of evaluating and measuring performance provides The Bogdahn Group with a practical foundation for our observations and recommendations. Nothing came to our attention that would cause The Bogdahn Group to believe that the information presented is significantly misstated.

The strategies listed may not be suitable for all investors. We believe the information provided here is reliable, but do not warrant its accuracy or completeness. Past performance is not an indication of future performance. Any information contained in this report is for informational purposes only and should not be construed to be an offer to buy or sell any securities, investment consulting, or investment management services.

Additional information included in this document may contain data provided by from index databases, public economic sources and the managers themselves.
