Investment Performance Review 4th Quarter 2014

4th Quarter 2014 Market Environment

- The fourth quarter of 2014 provided a polar opposite experience to what was seen in the third quarter. While large cap stocks greatly outperformed their small cap brethren last quarter, the reversal this period was pronounced and swift. Small caps returned between +9.4% and +10.1% during the period, which was significantly better than the +4.8% to +5.0% return within the large cap realm. However, for the year, large caps (as measured by the S&P 500 Index) remained on top, exceeding mid and small caps by approximately 50 and 880 basis points (bps), respectively.
- The third quarter ended a streak of eight consecutive positive quarters for small cap equities, but the hiccup was short-lived. Small caps, while not “cheap” by relative standards, were more reasonably valued at the beginning of the period relative to recent history. The decline allowed many managers to reinvest heavily in the fourth quarter, lifting the Russell 2000 Index +9.7% higher. Unlike the previous two quarters, which were characterized by fits and starts, all three months of the fourth quarter were positive for the major equity indexes. Only the Russell 1000 Index, with a -0.2% return in December, experienced a down month during the period.
- Non-US equity markets underperformed domestic equity returns significantly during the fourth quarter and ended in negative territory. Currency effects worked against US investors during the period as the USD appreciated strongly against almost every other country's currency except China. Emerging market equities lagged developed markets by 0.9%. For the calendar year 2014, non-US equities drastically underperformed domestic equities. This disparity is the largest on record since 1997, when the MSCI EAFE Index underperformed the S&P 500 Index by over 30%—after two consecutive double-digit underperforming years in 1995 and 1996.
- Against all expectations, with lower credit quality and the ultra short-term segments being the sole exceptions, domestic bond yields continued to fall during the fourth quarter. The trailing, one-year return for the Barclays Aggregate Index was strongly positive (+6.0%). Higher quality dominated benchmarks (Treasuries, IG Corporates, Agency Mortgages) posted healthy returns. Performance dispersion across sectors was low, as Government Bonds returned +1.9% followed by Mortgages and IG Corporates at +1.8%. In contrast, TIPS lagged, essentially remaining flat (-0.03%) for the period.

Quarter Performance

1-Year Performance

- After treading water in the third quarter, domestic equities experienced a strong last quarter to close out 2014 with double digit returns in large and mid capitalization stocks. Large caps duplicated a strong second quarter with returns in a range of +4.8% to +5.0% (value, core, growth) to end the year with a return above 13%. The Russell 1000 Index and Russell MidCap Index both finished with a +13.2% return for the 2014 calendar year. Both core indices had a similar quarterly result as well, gaining 4.9% and 5.9%, respectively. Small caps experienced a dramatic resurgence, as the Russell 2000 Index gained 9.7% in the fourth quarter after having dropped 7.4% in the third quarter. However, small caps still underperformed their larger cap peers on the year by a fairly wide margin, as the core index gained 4.9%.
- Following the largest performance gap between large and small caps in a quarter since the first quarter of 1999, small caps doubled the performance of large caps during the fourth quarter, finishing the year with a positive return for the fifth time out of the past six years.
- Following a quarter where value underperformed growth indices across the spectrum of domestic equity benchmarks, there was little discrepancy between style-specific indices during the fourth quarter. This is best reflected by the Russell 3000 Value Index (+5.3%) and the Russell 3000 Growth Index (+5.2%) quarterly result. The range between growth and value was fairly narrow for the entire year as well. When factoring in the seven GICS sectors that comprise more than 5% of the Russell 1000 Index, only the Energy sector performed outside of a narrow range for the fourth quarter. Despite brief periods of spiked activity, the year has been marked by low trading volume and low volatility.
- Small caps continue to support a slightly higher valuation than large caps on a forward P/E basis (18.1 vs. 16.2), but are now below mid caps in relative valuation (18.6). All three categories are above their 20-year average P/E ratios, led by mid cap (18.6 vs. 16.5) and followed by small cap (18.1 vs. 17.3). The current valuation on large caps is modestly above its long-term average (16.2 vs. 16.1). When comparing growth versus value averages, the P/E multiples is narrowing between the two style categories, as small, mid, and large cap value P/E multiples are all now above 20-year averages while the growth equivalents are below.

Quarter Performance - Russell Style Series

1-Year Performance - Russell Style Series

- There was wide economic sector performance dispersion during the fourth quarter. Within large caps, Utilities, Consumer Discretionary, and Consumer Staples posted the strongest results. On a one year basis, the strongest performers were Utilities, Health Care, Technology, and Consumer Staples, three of four of which are traditionally considered defensive sectors. Energy, Telecom, and Materials were the only sectors with negative returns for the fourth quarter, with only Energy posting a negative return for 2014 as a whole due to a sharp drop in oil prices that began in the third quarter.
- Compared to large caps, small caps posted a strong quarter, but still trailed in all sectors over calendar year 2014. Performance for the fourth quarter as well as calendar year 2014 was strongest in defensive sectors with particularly strong results in Utilities and Health Care. Three sectors underperformed during 2014 with the Energy sector being the largest outlier, returning a disproportionate -35.9% for the year.
- As the broad US stock market rebounded from near-term lows, valuations tended to remain elevated as compared to recent years. On a trailing P/E basis, as expected, the Russell 1000 is relatively cheaper than the Russell 2000. In both large and small caps, Health Care, Financial, and Technology sectors look relatively overvalued, whereas Utility, Telecom, and Energy sectors appear to be among the most undervalued.
- By far the most drastic underperformance of all sectors occurred in Energy. As mentioned above, oil prices (Brent Crude Spot Price) have plunged since the beginning of the third quarter, falling from a June high near \$115/barrel and closing the year around \$56/barrel. The cause of this drastic price change centers around an expanding world oil supply with lower forecasts of world oil consumption growth due to a weaker outlook for the global economy.

Source: Morningstar Direct

- The pattern of returns during the fourth quarter was similar to the prior quarter, in that a moderately positive middle month was book-ended by negative months. Volatility continued to be above average during the period.
- On a regional basis, equities in Latin America turned in the worst quarterly performance in both local and USD terms. In addition, Latin America was one of two regions to turn in negative performance in local currency terms for the 2014 calendar year, with EM EMEA being the other.
- The range of returns for individual non-US countries was tighter this period, but with several negative outliers. Hong Kong (+3.1%) was the best developed market performer and Turkey (+11.6%) was the best emerging market performer. The worst-performing developed country was Norway (-24.9%) followed by Portugal (-23.0%). Russia was the worst-performing equity market within the EM universe with a return of -32.8% for the quarter.
- During the fourth quarter, USD appreciation once again created a significant drag on returns for US investors in overseas markets. All four of the broad, non-US equity indices shown to the right ended the quarter in positive territory when measured in local currency terms, but turned negative when converted to USD. The biggest exchange difference came with the MSCI EAFE Index, which returned +1.8% in local terms and -3.5% in USD terms.
- USD strength again weighed on the Energy sector during the fourth quarter, as it posted the weakest sector return (-19.8%) by far in the MSCI-ACWIxUS Index. The Materials sector, which is also negatively impacted by USD strength, was the second worst performing sector within the MSCI ACWIxUS Index, returning -7.5% for the quarter. In the developed market MSCI EAFE Index, Consumer Discretionary was the only sector to end the quarter in positive territory (+3.1%). Financials (+1.7%) and Information Technology (+1.5%) were the only positive sectors in the MSCI EM Index for the quarter.
- Growth widely outperformed value across the board. Small caps slightly outperformed large caps within developed markets and vice versa in emerging markets.

Source: MSCI Global Index Monitor (Returns are Gross in USD)

- With the exception of credit sensitive segments, domestic bond markets were mostly positive in the fourth quarter, as concerns about foreign growth and overseas inflation trumped the effects of strong economic data. The Fed's dovish comments in the fourth quarter seemed to indicate no rate hikes are imminent. Given low yields abroad, foreign investor interest in domestic paper remains robust and led to lower yields during the period.
- In contrast to the third quarter, in which sector performance was mixed, most sectors posted positive returns during the period. Treasuries and mortgages rose +1.9% and +1.8%, respectively. These strong gains were partially off-set by weakness in high yield (-1.0%) and in overseas markets as the Global Aggregate x US and Multiverse indices returned -3.0% and -1.2%, respectively.
- For the second consecutive quarter, lower rated bonds lagged their higher quality peers. Baa-rated bonds lagged higher quality credits by 50 to 100 bps during the period. However, on a one-year basis, Baa-rated bonds outpaced higher-rated credits by a moderate margin.
- Longer-dated securities drastically outperformed short and intermediate maturities despite the end of the Federal Reserve's QE program. The rally pushed the broad-based Barclays Aggregate Index ahead of the Barclays Intermediate Aggregate Index by +0.6% for the quarter and +1.9% for the 2014 calendar year.
- High yield bonds fell 1.0%, marking back-to-back negative quarterly returns for the asset class. After exceeding investment grade bonds for seven consecutive quarters up until March 31, 2014, high yield bonds trailed investment grade securities for the last nine months and were the worst performing domestic sector in 2014.
- The US bond market easily outpaced international bonds by 480 bps, represented by the Barclays Global Aggregate ex US Index, which was negatively impacted by USD strength. The fourth quarter's weak performance by global bonds exacerbated an already wide performance disparity as the one-year trailing domestic bond performance remained ahead by a wide margin.

Quarter Performance

1-Year Performance

- Despite the Fed's bond buying program drawing to a close in October, investors continue to wonder if rising rates will ever occur. This is due to domestic economic strength exceeding the rest of the developed world and the resulting strength of the USD. As a result, while domestic yields remain low, they exceed those of overseas sovereign bonds, especially on a real return basis. This has led to a demand for longer-term US paper and a flattening of the yield curve.
- After moving wider in the third quarter, option adjusted spreads on Baa-rated bonds continued to broaden relative to Treasuries, widening by an additional 39 bps during the fourth quarter. This spread widening negatively impacts bond prices (which move in the opposite direction) and performance of lower quality credits. This quarter's rise in spreads erased the rally that occurred earlier in the year. Spreads are now at their widest point in over a year.
- The yield curve in the US continued to flatten during the fourth quarter. Since prices and performance move in the opposite direction of yields, the long-end of the curve was the best performing maturity segment as 30-year Treasuries returned +10.1% during the period. The yield on the 10-year Treasury fell from 2.52% to 2.17% and dropped below 2.0% early in 2015. At the short end of the curve, 2-year Treasuries rose from 0.58% to 0.67%.
- Since rising to more attractive yields in mid-to-late 2013, the yield curve has gradually flattened and interest rates have declined, particularly in longer-dated maturities. This resulted in positive returns over the past twelve months, especially in investment grade or better, intermediate term or longer securities. The expectation is that given strong economic growth, lower unemployment, the end of the Fed's QE program, and better housing numbers, interest rates will soon rise. However, the impact of foreign purchases and generally benign inflation has been a natural headwind to rising rates. Investment professionals have migrated to a more neutral position when forecasting when and if rates will rise from here.

- Neither The Bogdahn Group, nor any covered associates have made political contributions to any official associated with the Tequesta Public Safety Officers' Pension Fund in excess of the permitted amount.

Active Return	- Arithmetic difference between the manager's performance and the designated benchmark return over a specified time period.
Alpha	- A measure of the difference between a portfolio's actual performance and its expected return based on its level of risk as determined by beta. It determines the portfolio's non-systemic return, or its historical performance not explained by movements of the market.
Beta	- A measure of the sensitivity of a portfolio to the movements in the market. It is a measure of the portfolio's systematic risk.
Consistency	- The percentage of quarters that a product achieved a rate of return higher than that of its benchmark. Higher consistency indicates the manager has contributed more to the product's performance.
Down Market Capture	- The ratio of average portfolio performance over the designated benchmark during periods of negative returns. A lower value indicates better product performance
Downside Risk	- A measure similar to standard deviation that utilizes only the negative movements of the return series. It is calculated by taking the standard deviation of the negative quarterly set of returns. A higher factor is indicative of a riskier product.
Excess Return	- Arithmetic difference between the manager's performance and the risk-free return over a specified time period.
Excess Risk	- A measure of the standard deviation of a portfolio's performance relative to the risk free return.
Information Ratio	- This calculates the value-added contribution of the manager and is derived by dividing the active rate of return of the portfolio by the tracking error. The higher the Information Ratio, the more the manager has added value to the portfolio.
R-Squared	- The percentage of a portfolio's performance that can be explained by the behavior of the appropriate benchmark. A high R-Squared means the portfolio's performance has historically moved in the same direction as the appropriate benchmark.
Return	- Compounded rate of return for the period.
Sharpe Ratio	- Represents the excess rate of return over the risk free return divided by the standard deviation of the excess return. The result is an absolute rate of return per unit of risk. A higher value demonstrates better historical risk-adjusted performance.
Standard Deviation	- A statistical measure of the range of a portfolio's performance. It represents the variability of returns around the average return over a specified time period.
Tracking Error	- This is a measure of the standard deviation of a portfolio's returns in relation to the performance of its designated market benchmark.
Treynor Ratio	- Similar to Sharpe ratio but utilizes beta rather than excess risk as determined by standard deviation. It is calculated by taking the excess rate of return above the risk free rate divided by beta to derive the absolute rate of return per unit of risk. A higher value indicates a product has achieved better historical risk-adjusted performance.
Up Market Capture	- The ratio of average portfolio performance over the designated benchmark during periods of positive returns. A higher value indicates better product performance.

The Bogdahn Group compiled this report for the sole use of the client for which it was prepared. The Bogdahn Group is responsible for evaluating the performance results of the Total Fund along with the investment advisors by comparing their performance with indices and other related peer universe data that is deemed appropriate. The Bogdahn group uses the results from this evaluation to make observations and recommendations to the client.

The Bogdahn Group uses time-weighted calculations which are founded on standards recommended by the CFA Institute. The calculations and values shown are based on information that is received from custodians. The Bogdahn Group analyzes transactions as indicated on the custodian statements and reviews the custodial market values of the portfolio. As a result, this provides The Bogdahn Group with a reasonable basis that the investment information presented is free from material misstatement. This methodology of evaluating and measuring performance provides The Bogdahn Group with a practical foundation for our observations and recommendations. Nothing came to our attention that would cause The Bogdahn Group to believe that the information presented is significantly misstated.

The strategies listed may not be suitable for all investors. We believe the information provided here is reliable, but do not warrant its accuracy or completeness. Past performance is not an indication of future performance. Any information contained in this report is for informational purposes only and should not be construed to be an offer to buy or sell any securities, investment consulting, or investment management services.
