

Investment Performance Review
Period Ending March 31, 2021

**Village of Tequesta
Public Safety Officers'
Pension Fund**

1st Quarter 2021 Market Environment

- Broad US equity markets produced positive returns for the 1st quarter of 2021. Performance during the period was largely driven by the effects of the American Rescue Plan (the 3rd round of US fiscal stimulus) and the growing deployment of COVID-19 vaccines. In March, President Biden signed the Plan into law providing an additional \$1.9 trillion of economic stimulus to the US which only served to bolster investors' optimism. As a result, for the 1st quarter, higher beta, small company stocks outperformed, returning 12.7% compared to 8.1% for mid-caps and 5.9% for large company stocks. The FDA also approved a third COVID-19 vaccine, a single dose treatment from Johnson & Johnson, for use. This approval created a better alignment of vaccine supply with countywide demand. The equity market has grown immensely over the past year as evidenced by the trailing 1-year chart which details the stellar rebound following a dramatic selloff in the 1st quarter of last year. Despite the sharp downturn at the onset of the pandemic, all broad US equity market indexes have rebounded and are trading at near-record levels. Most notably, domestic small cap stocks have returned 94.9% while US large caps returned 56.4% over the trailing 1-year period.
- Broad international equity markets also posted positive returns for the 1st quarter. Similar to US markets, a theme of optimism surrounding the outlook for global growth and demand drove performance. In the 1st quarter, the MSCI EAFE Index (3.5%) modestly outperformed the MSCI Emerging Markets Index (2.3%) as a strengthening US dollar created headwinds for emerging markets. This trend is reversed over the trailing 1-year period with the MSCI EAFE Index's return of 44.6%, underperforming the MSCI Emerging Markets Index return of 58.4%. While the European Union (EU) passed its largest-ever relief bill at the end of 2020, unlike the relief bills passed in the US, the EU benefits will take months to be dispersed through the economy. This delay most likely played a part in why the MSCI EAFE Index underperformed US markets in the 1st quarter.
- In contrast to equities, fixed income returns were negative during the 1st quarter as long-term interest rates rose and the yield curve noticeably steepened. However, despite this, the Fed reiterated its intent to keep short-term rates low based on the expectation that inflation will not exceed the average 2% target. For the quarter, the Bloomberg Barclays (BB) US Aggregate Index returned -3.4% driven by the underperformance in US Government (-4.1%) and Corporate Investment grade (-4.6%) bonds. For the 1-year period, while not comparable to equity market advances, Corporate Investment Grade credit proved to be an area of strength returning 8.7% and was closely followed by US TIPS returning 7.5%.

Quarter Performance

1-Year Performance

Source: Investment Metrics

- Continuing their recent trend, the majority of US equities posted their 4th straight quarter of positive returns across both the style and market capitalization spectrums, with mid cap growth being the modestly negative outlier. During the quarter, small cap stocks outpaced both mid cap and large cap stocks as momentum related to vaccines and fiscal stimulus drove the market. The Russell 2000 Index returned a strong 12.7% compared to 8.1% for the Russell Mid Cap Index and 6.3% for the Russell 1000 Index.
- Value stocks outpaced growth stocks for the second consecutive quarter. Similar to the 4th quarter, the Russell 2000 Value Index was the best performing style index for the quarter with a return of 21.2%. While not as robust as small cap value, both the mid cap (13.1%) and large cap (11.3%) value benchmarks posted double-digit gains. In contrast, growth-oriented companies lagged value-oriented companies at each capitalization level. The widest performance dispersion occurred in small cap with a span of 16.3% separating the growth and value index returns. Beneath the headline index performance, the growth and value differentials are also observable across economic sector returns since the value benchmarks are more heavily weighted to sectors such as energy and financials, which led sector results, while growth indexes are dominated by their weights to technology and healthcare, which lagged.
- Following one of the sharpest drawdowns in history, stock returns were strongly positive over the trailing 1-year period across all styles and market capitalizations. Not surprisingly, higher beta, small cap stocks represented by the Russell 2000 produced an outsized return of 94.8%. While not as strong as small cap, performance in mid cap (73.6%) and large cap (60.6%) benchmarks was also extremely impressive over the trailing year. Despite more than a 30% dispersion between market capitalization performance over the trailing 1-year period, the difference between value and growth index results within each capitalization segment was much narrower. However, these style-based results do show how much value stocks have recovered relative to growth stocks in the recent quarter after lagging significantly following the onset of the pandemic.

Source: Investment Metrics

- Sector performance was positive across all eleven large cap economic sectors for the 1st quarter. Six sectors outpaced the return of the broad index during the period. The pro-cyclical rotation that began during the latter part of 2020 continued through the 1st quarter of 2021. Value-oriented sectors like energy and financials were some of the best performers for the quarter returning 30.9% and 16.2%, respectively. The energy sector experienced strong returns primarily due to rising energy prices resulting from increased expectations of economic growth and reduced supply. Financial stocks benefited from rising interest rates which acted as a tailwind to earnings. While all sectors experienced positive returns, consumer staples (1.6%) and information technology (1.3%) were significant laggards relative to their sector peers and the broad index results.
- Over the trailing 1-year period, large cap consumer discretionary (91.1%), energy (79.6%), and materials (78.5%) were the best performing economic sectors. For the full year, seven sectors exceeded the return of the broad benchmark: communication services, consumer discretionary, energy, financials, industrials, information technology, and materials. In contrast, sectors that were less impacted by COVID-19 such as consumer staples and utilities posted solid, but lower, returns for the trailing 1-year period. It is astonishing to observe that the weakest economic sector in the Russell 1000 for the trailing year, utilities, still managed to produce a strong return of 19.8%.
- Similar to large cap stocks, all eleven small cap sectors posted positive performance for the recent quarter and seven of them posted returns greater than the Russell 2000 Index. The index was led higher by strength in the energy sector, which returned 41.8% for the quarter. Consumer discretionary stocks also performed well during the period, returning 26.7%. Some of the sector's absolute performance for the quarter can be partially attributed to the "Reddit-fueled" individual investor trading frenzy that took place in stocks like GameStop (+907.5%) and AMC Entertainment (+223.1%) which experienced significant positive performance and volatility.
- Small cap stocks significantly outperformed large cap across the majority of economic sectors for the trailing 1-year period. While large cap sector returns were impressive, small cap performance within the consumer discretionary (200.0%) and energy (150.0%) sectors were simply amazing. Consumer discretionary's outsized performance is mainly attributable to the economic recovery seen throughout 2020- multiple stimulus injections into the economy and investor confidence in the progress on vaccines. Like the large cap index, the bottom performing sector in the small cap benchmark was utilities (16.1%). This sector performance produced a staggering dispersion of more than 180% from the best to the worst-performing sector in the Russell 2000.

Source: Morningstar Direct
As a result of the GICS classification changes on 9/28/2018 and certain associated reporting limitations, sector performance represents backward looking performance for the prior year of each sector's current constituency, post creation of the Communication Services sector.

Source: Morningstar Direct

- Nearly all broad international equity indexes the chart tracks posted positive returns in both US dollar (USD) and local currency terms for the 1st quarter. Much like the trend seen in the US equity markets, international benchmarks benefited from the optimism surrounding the continued roll-out of COVID-19 vaccines. Fiscal and monetary stimulus also remained supportive throughout the Eurozone, UK, and Japan in the 1st quarter and benefited from the rebound in demand for global goods. For the period, developed markets outperformed emerging markets in both USD and local currency. The MSCI EAFE Index returned 3.5% in USD and 7.6% in local currency terms for the period while the MSCI Emerging Markets Index returned a lower 2.2% in USD and 3.5% in local currency terms. The performance of both broad international benchmarks faced headwinds from currency conversion as the USD strengthened relative to most major developed currencies and thus led to lower USD results. During the 1st quarter, the only regional index component that had negative performance was EM Latin American. This region's -5.3% return was largely driven by the negative performance of Columbia (-17.2%) and Brazil (-10.0%) during the period.

- The trailing 1-year results for international developed and emerging markets were positive across all regions and currencies. The MSCI EAFE Index returned 44.6% in USD and 36.6% in local currency terms, while the MSCI Emerging Markets Index returned 58.4% in USD and 53.0% in local currency terms. Like last quarter, performance within the emerging markets was led by Asian countries with the EM Asia Index region returning 60.1% in USD.

As a result of the GICS classification changes on 9/28/2018 and certain associated reporting limitations, sector performance represents backward looking performance for the prior year of each sector's current constituency, post creation of the Communication Services sector.

- Fixed income markets declined sharply during the 1st quarter primarily due to rising interest rates which acted as a drag on bond benchmark performance. The Bloomberg Barclays (BB) US Aggregate Bond Index returned -3.4% for the period. Digging deeper into the investment grade index's segments, while each component was negative, the US Treasury (-4.3%) and US Corporate Investment Grade (-4.6%) segments drove the results. Although yields on issues of less than 2-years declined during the quarter, yields on longer-dated issues rose substantially as the term to maturity increased. Notably, US High Yield (non-investment grade) was the only benchmark tracked on the chart to produce a positive result, adding 0.9% for the quarter. High yield bonds generally have a shorter duration compared to either US Treasury or US investment grade corporate bonds, and as such, are less affected by rising interest rates. Importantly, credit spreads also continued to decline during the period which acted as an additional tailwind for high yield issues. Outside of domestic markets, the BB Global Aggregate ex US Index posted a -5.3% return for the quarter. Like international stocks, global bonds were negatively impacted by the strengthening USD. Also notable was the revision in quality's performance in the 1st quarter relative to the previous three quarters. BBB rated credit (-4.3%) underperformed AAA (-2.9%) issues by 1.4%. In contrast, over the trailing 1-year period, BBB issues (13.1%) outpaced AAA issues (-2.3%) by a sizable margin.
- Over the trailing 1-year period, domestic bonds performance was small but positive while global bonds posted solid results. The BB Global Aggregate ex US Index return of 7.2% easily outpaced the domestic BB US Aggregate Index's return of 0.7%. A steepening yield curve, combined with a falling USD, were the primary contributors to the relative outperformance of global bonds. Results for the year were split beneath the headline performance of the BB US Aggregate Index with the US Corporate Investment Grade segment returning 8.7% and the US Treasury segment returning -4.4%. The US High Yield Index's return of 23.7% was a positive outlier in fixed income for the 1-year period. High Yield issues likely benefited both from narrowing of credit spreads as well as capital appreciation following the pandemic's economic shock during the 1st quarter of 2020.

Quarter Performance

1-Year Performance

Source: Bloomberg

- Much of the index performance detailed in the bar graphs on the previous page is visible on a time series basis in the yield graph to the right. The “1-Year Trailing Market Rates” chart illustrates that throughout 2020 the US 10-year Treasury (green line) stayed between 0.5% and 1.0% but began increasing rapidly at the beginning of 2021, reaching a high of 1.74% during the 1st quarter of 2021. At the start of 2020, US interest rates declined significantly following the onset of the pandemic and the response from the US Federal Reserve Bank (Fed) to lower rates back near zero. 2021’s acceleration in longer-term rates is due to an increase in investor expectations of stronger economic growth and inflation concerns over the continued issuance of new Treasury bonds by the government to fund stimulus. The blue line illustrates changes in the BAA OAS (Option Adjusted Spread). This measure quantifies the additional yield premium that investors require to purchase and hold non-Treasury investment grade issues. The line illustrates the normalization in credit spreads following the substantial widening at the onset of the pandemic. Credit spreads continued their steady decline through the 1st quarter as concerns over corporate defaults subsided. The green band across the graph illustrates the Fed Funds Rate. Over the past year, the Fed’s target rate range has remained unchanged at 0.00% - 0.25%. During its March meeting, the Federal Open Market Committee (FOMC) upgraded its projections for the US economy in 2021 but vowed to keep interest rates near zero while also maintaining its asset purchasing measures aimed at supplying the market with liquidity.
- The lower graph provides a snapshot of the US Treasury yield curve at the end of each of the last four quarters. Beginning in the 4th quarter of 2020, longer-term interest rates began to move higher as investors’ optimism improved. This trend continued through the 1st quarter. Short term interest rates, primarily those under two years, fell modestly while all long-term rates increased. The combination of additional fiscal stimulus, higher expected economic growth, and inflation concerns all contributed to higher long-term rates. The 10-year Treasury ended the quarter at 1.74%, more in line with pre-pandemic levels, compared to 0.52% at its lowest point in 2020 and 0.93% at the beginning of 2021.

Active Return	- Arithmetic difference between the manager's performance and the designated benchmark return over a specified time period.
Alpha	- A measure of the difference between a portfolio's actual performance and its expected return based on its level of risk as determined by beta. It determines the portfolio's non-systemic return, or its historical performance not explained by movements of the market.
Beta	- A measure of the sensitivity of a portfolio to the movements in the market. It is a measure of the portfolio's systematic risk.
Consistency	- The percentage of quarters that a product achieved a rate of return higher than that of its benchmark. Higher consistency indicates the manager has contributed more to the product's performance.
Distributed to Paid In (DPI)	- The ratio of money distributed to Limited Partners by the fund, relative to contributions. It is calculated by dividing cumulative distributions by paid in capital. This multiple shows the investor how much money they got back. It is a good measure for evaluating a fund later in its life because there are more distributions to measure against.
Down Market Capture	- The ratio of average portfolio performance over the designated benchmark during periods of negative returns. A lower value indicates better product performance
Downside Risk	- A measure similar to standard deviation that utilizes only the negative movements of the return series. It is calculated by taking the standard deviation of the negative quarterly set of returns. A higher factor is indicative of a riskier product.
Excess Return	- Arithmetic difference between the manager's performance and the risk-free return over a specified time period.
Excess Risk	- A measure of the standard deviation of a portfolio's performance relative to the risk free return.
Information Ratio	- This calculates the value-added contribution of the manager and is derived by dividing the active rate of return of the portfolio by the tracking error. The higher the Information Ratio, the more the manager has added value to the portfolio.
Public Market Equivalent (PME)	- Designs a set of analyses used in the Private Equity Industry to evaluate the performance of a Private Equity Fund against a public benchmark or index.
R-Squared	- The percentage of a portfolio's performance that can be explained by the behavior of the appropriate benchmark. A high R-Squared means the portfolio's performance has historically moved in the same direction as the appropriate benchmark.
Return	- Compounded rate of return for the period.
Sharpe Ratio	- Represents the excess rate of return over the risk free return divided by the standard deviation of the excess return. The result is an absolute rate of return per unit of risk. A higher value demonstrates better historical risk-adjusted performance.
Standard Deviation	- A statistical measure of the range of a portfolio's performance. It represents the variability of returns around the average return over a specified time period.
Total Value to Paid In (TVPI)	- The ratio of the current value of remaining investments within a fund, plus the total value of all distributions to date, relative to the total amount of capital paid into the fund to date. It is a good measure of performance before the end of a fund's life
Tracking Error	- This is a measure of the standard deviation of a portfolio's returns in relation to the performance of its designated market benchmark.
Treynor Ratio	- Similar to Sharpe ratio but utilizes beta rather than excess risk as determined by standard deviation. It is calculated by taking the excess rate of return above the risk free rate divided by beta to derive the absolute rate of return per unit of risk. A higher value indicates a product has achieved better historical risk-adjusted performance.
Up Market Capture	- The ratio of average portfolio performance over the designated benchmark during periods of positive returns. A higher value indicates better product performance.

AndCo compiled this report for the sole use of the client for which it was prepared. AndCo is responsible for evaluating the performance results of the Total Fund along with the investment advisors by comparing their performance with indices and other related peer universe data that is deemed appropriate. AndCo uses the results from this evaluation to make observations and recommendations to the client.

AndCo uses time-weighted calculations which are founded on standards recommended by the CFA Institute. The calculations and values shown are based on information that is received from custodians. AndCo analyzes transactions as indicated on the custodian statements and reviews the custodial market values of the portfolio. As a result, this provides AndCo with a reasonable basis that the investment information presented is free from material misstatement. This methodology of evaluating and measuring performance provides AndCo with a practical foundation for our observations and recommendations. Nothing came to our attention that would cause AndCo to believe that the information presented is significantly misstated.

This performance report is based on data obtained by the client's custodian(s), investment fund administrator, or other sources believed to be reliable. While these sources are believed to be reliable, the data providers are responsible for the accuracy and completeness of their statements. Clients are encouraged to compare the records of their custodian(s) to ensure this report fairly and accurately reflects their various asset positions.

The strategies listed may not be suitable for all investors. We believe the information provided here is reliable, but do not warrant its accuracy or completeness.
